## Programme management

### Overview

Outsourced programme management, particularly in health, science and technology R&D, is the principal activity of LGC's External Programme Management Group (EPMG) with its 12-year track record in UK government service delivery of [public sector research programmes](#).

A second programme management team is dedicated to LGC's contract with the Department of Health to operate the Central Commissioning Facility for the National Institute for Health Research (NIHR) and the Policy Research Programme (PRP).

The scale of public funding we support now runs to hundreds of millions of pounds per year.

Our success in providing reliable services trusted by public bodies is driven by our principle to ensure win-win partnerships, sustainable over the long-term, and adapting to changing needs.

Our capability is broad ranging and amongst the most comprehensive in the UK.
